

Meet your new AI teammates

Agents with their own computers that get work done.
Tonight: a live demo, a month of Cursor Pro for the room, and a
build challenge.

Agenda

- | | | |
|----|--|-----------|
| 01 | Welcome. Then a live Grok Bot demo. | SPACEXAI |
| 02 | Yale AI: what we are doing this year. | THE BOARD |
| 03 | Get Cursor Pro, on SpaceXAI. Scan, redeem, done. | SPACEXAI |
| 04 | Build time! Rapid-fire Cursor: the challenge. | EVERYONE |
| 05 | Submit by tomorrow midnight. How to keep building with us. | EVERYONE |

Live Grok Bot demo

Filippo Fonseca, Yale AI

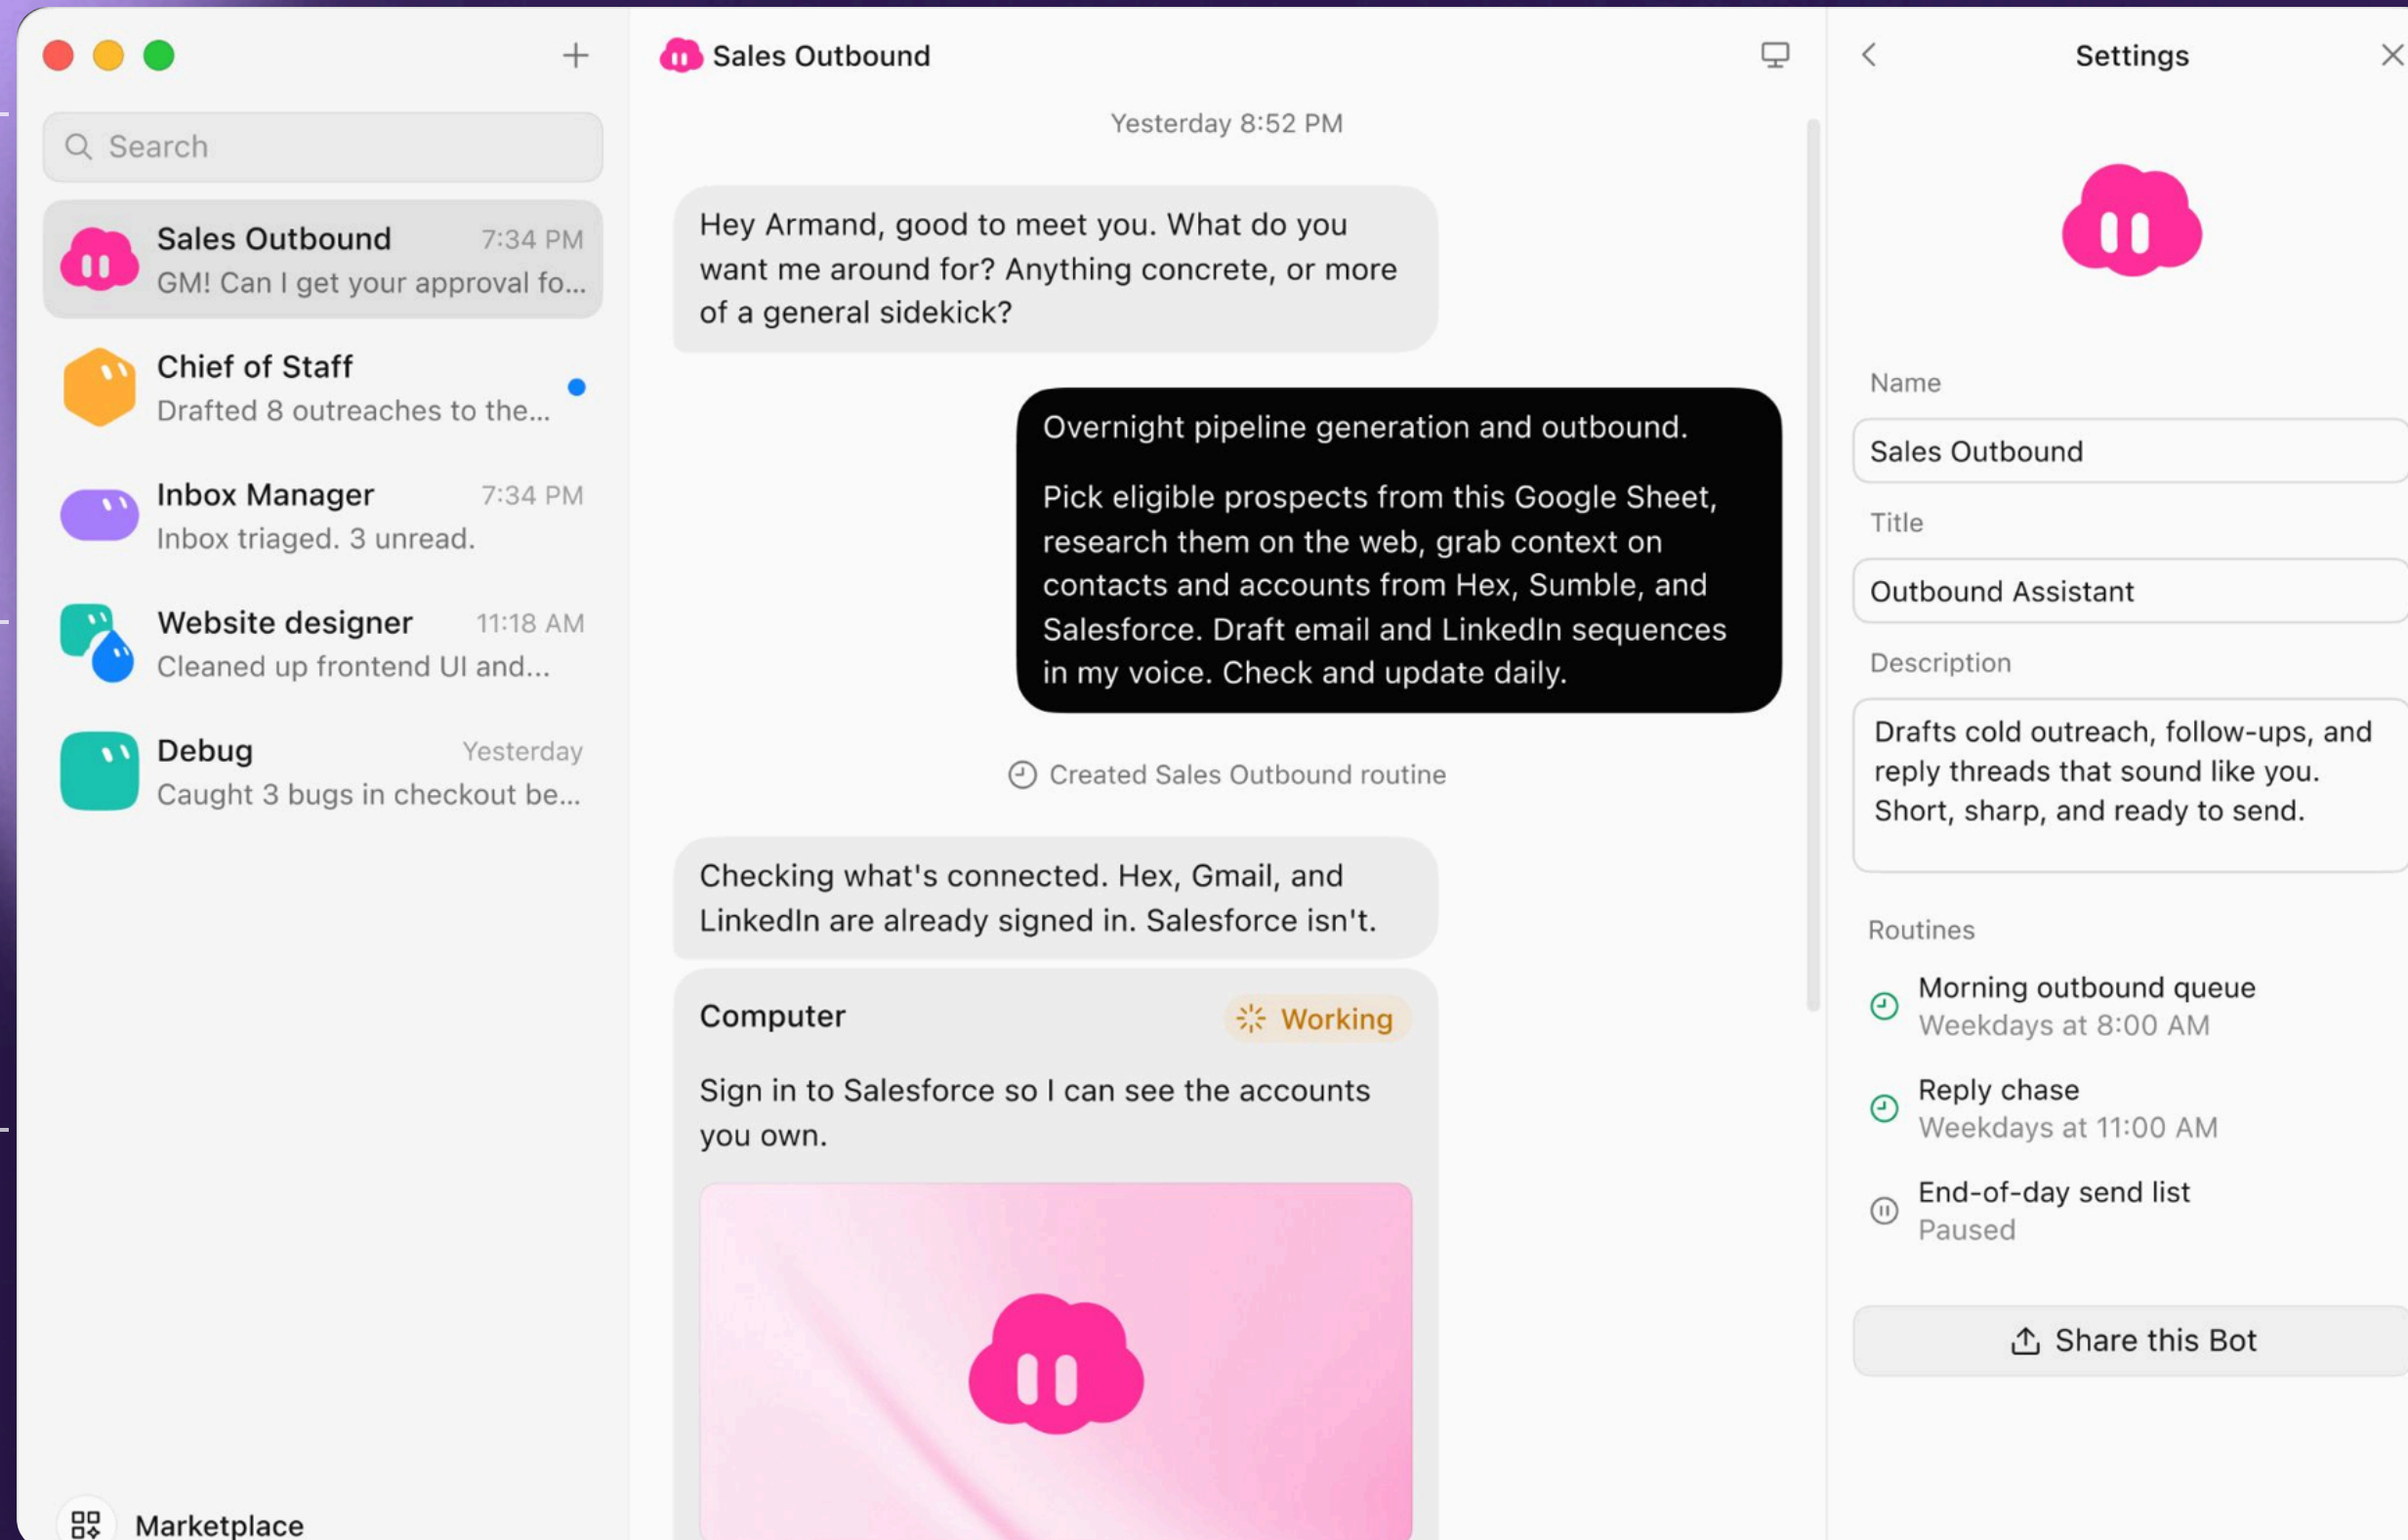

Introducing Grok Bot

Create bots for different jobs

Message bots like teammates

Bots keep context in memory and improve as they go

Log bots into your tools as they use them like you

Set up automations and routines

Easily share your bots with others

AI is evolving fast

Chatbots

Answer questions, people do the work

Copilots

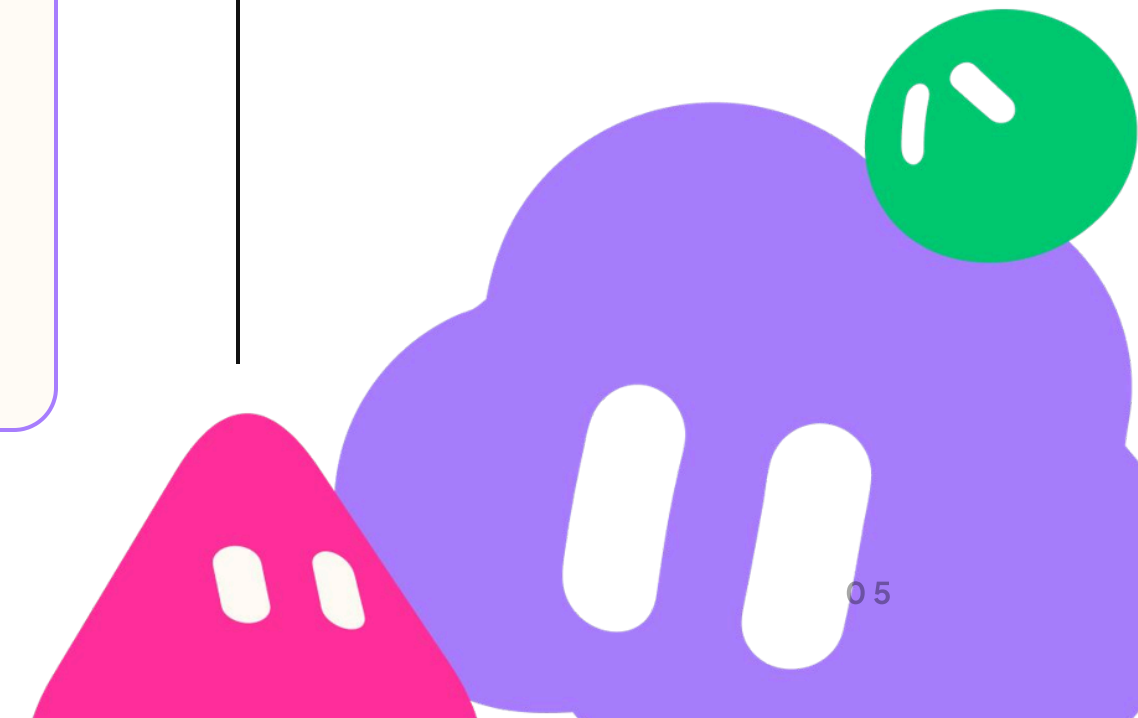

Help with tasks, people drive every step

AI teammates

Own outcomes, start to finish. People set direction and review

Output

The challenge with most agents

❌ Complicated setup

```
1. # Project Instructions
2.
3. ## Code Style
4.
5. - Use TypeScript for all new files
6. - Prefer functional components in React
7. - Use snake_case for database columns
8.
9. ## Architecture
10.
11. - Follow the repository pattern
12. - Keep business logic in service layers
```

❌ Local first

Ran terminal packages

```
pnpm install
pnpm --filter web build
pnpm --filter api prisma generate
pnpm --filter api db:seed:test
```

❌ Connector limitations

	Gmail	Connected 
	Slack	Unavailable 
	Salesforce	Connected 
	WhatsApp	Unavailable 

❌ Constant monitoring

```
pnpm install && pnpm --filter web
build && pnpm --filter api prisma
generate && pnpm --filter api
db:seed:test
```

Cancel Run

❌ Painful sharing

```
/apply-notion-styleguide.md
/outbound-sales-protocol.md
/global-design-standards.md
/code-review-frontend.md
/fix-merge-conflicts-agents.md
```

Grok Bot flips every one of these.

✅ Talk to it

No config files. Tell a bot its job in plain English, like a new teammate.

✅ Its own computer

Runs in the cloud, 24/7. Nothing to install, nothing tied to your laptop.

✅ Logs into your tools

Gmail, Slack, Canvas, Sheets, the browser. It uses them like you would.

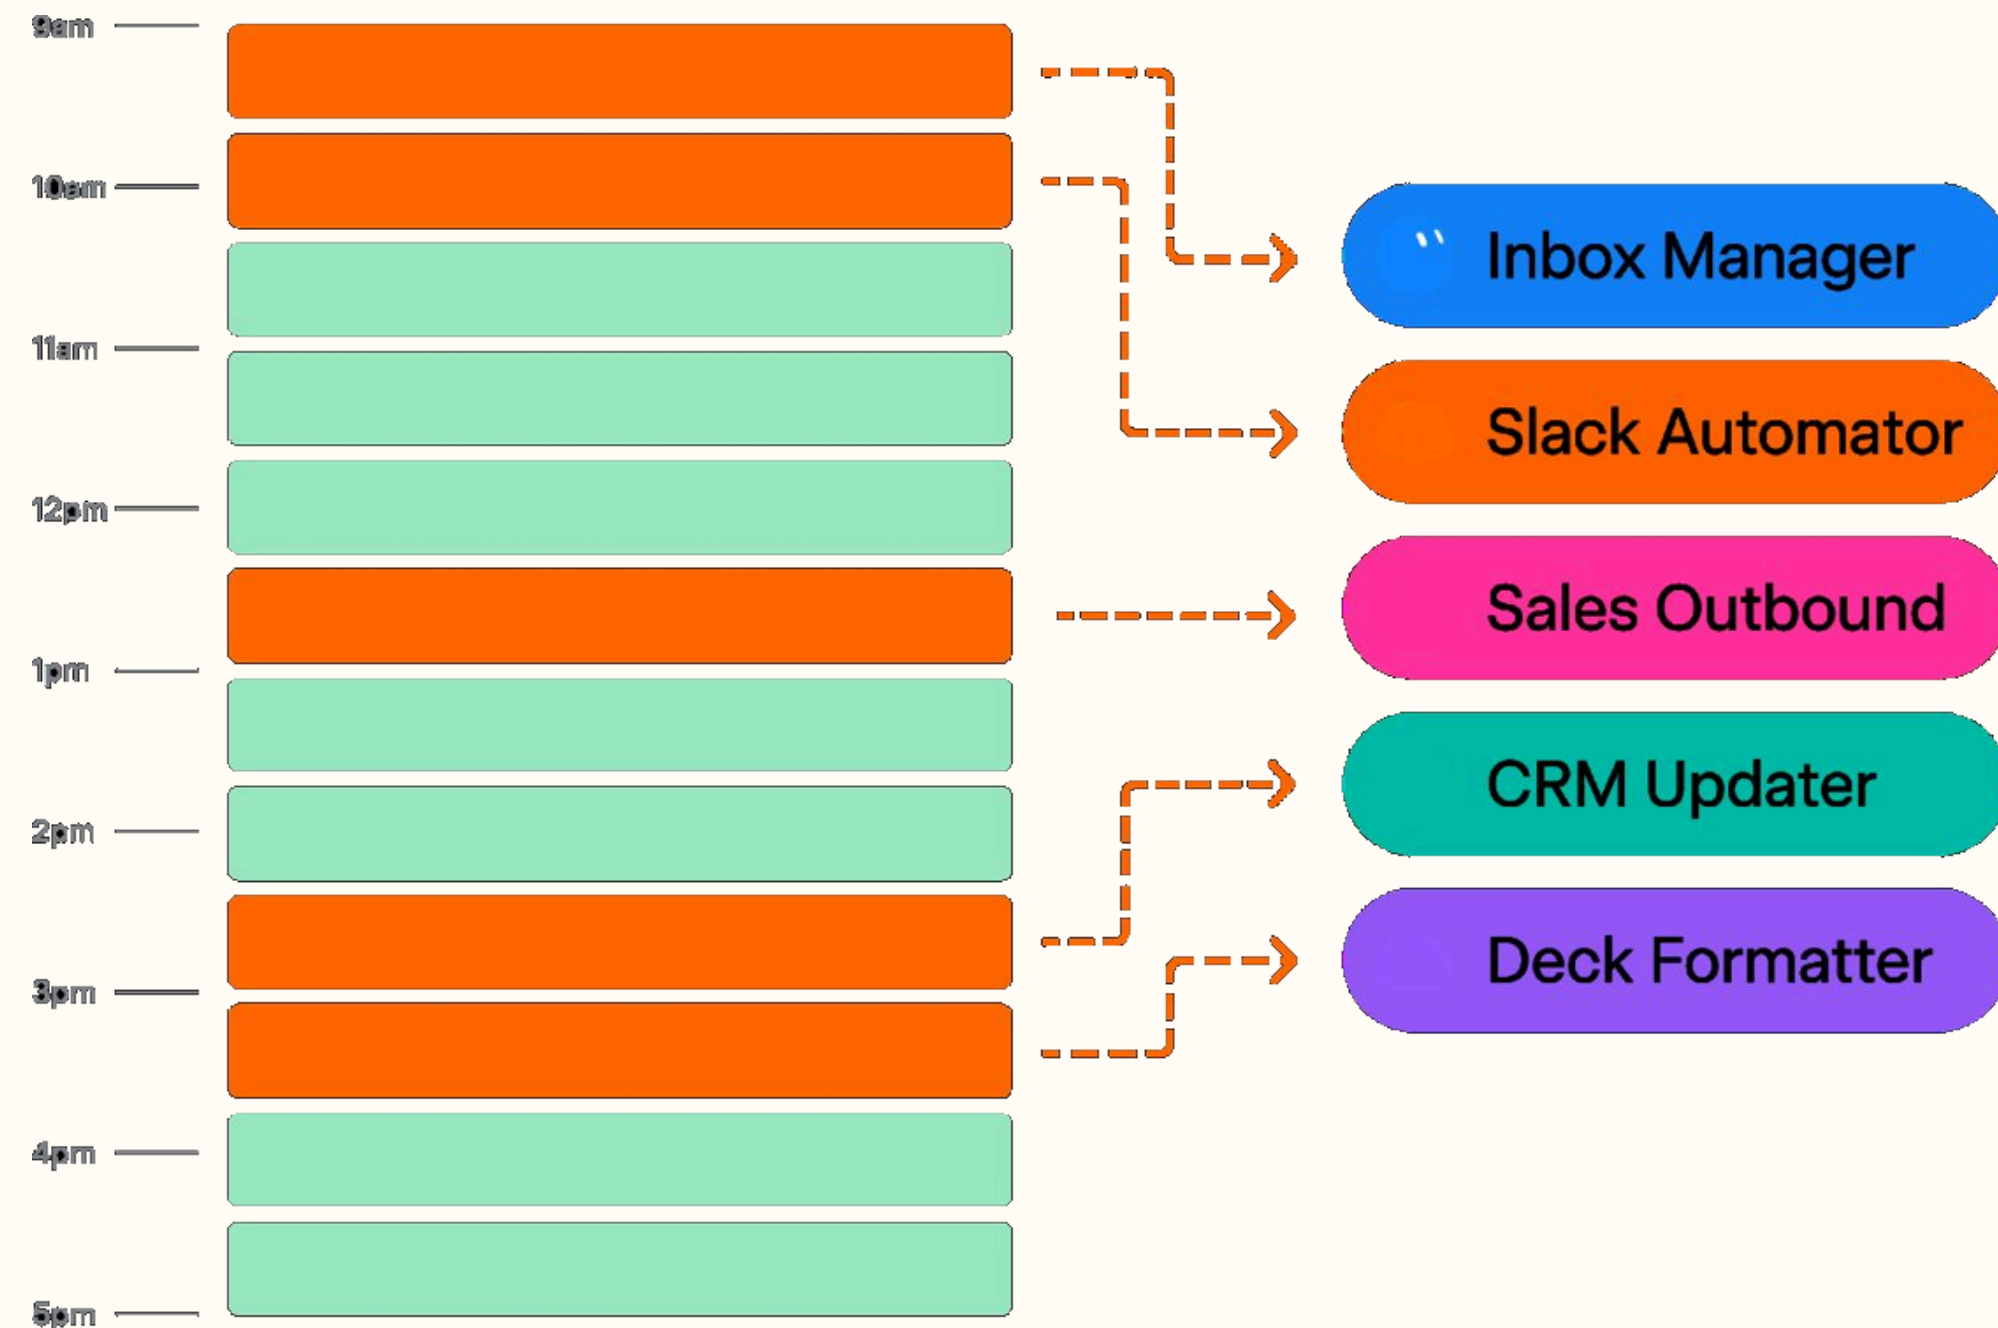

✅ Works unattended

Routines and automations. It reports back; you do not babysit it.

✅ Share it like a link

Hand your bot to a friend or your whole club in one click.

Today everyone wastes time with routine work

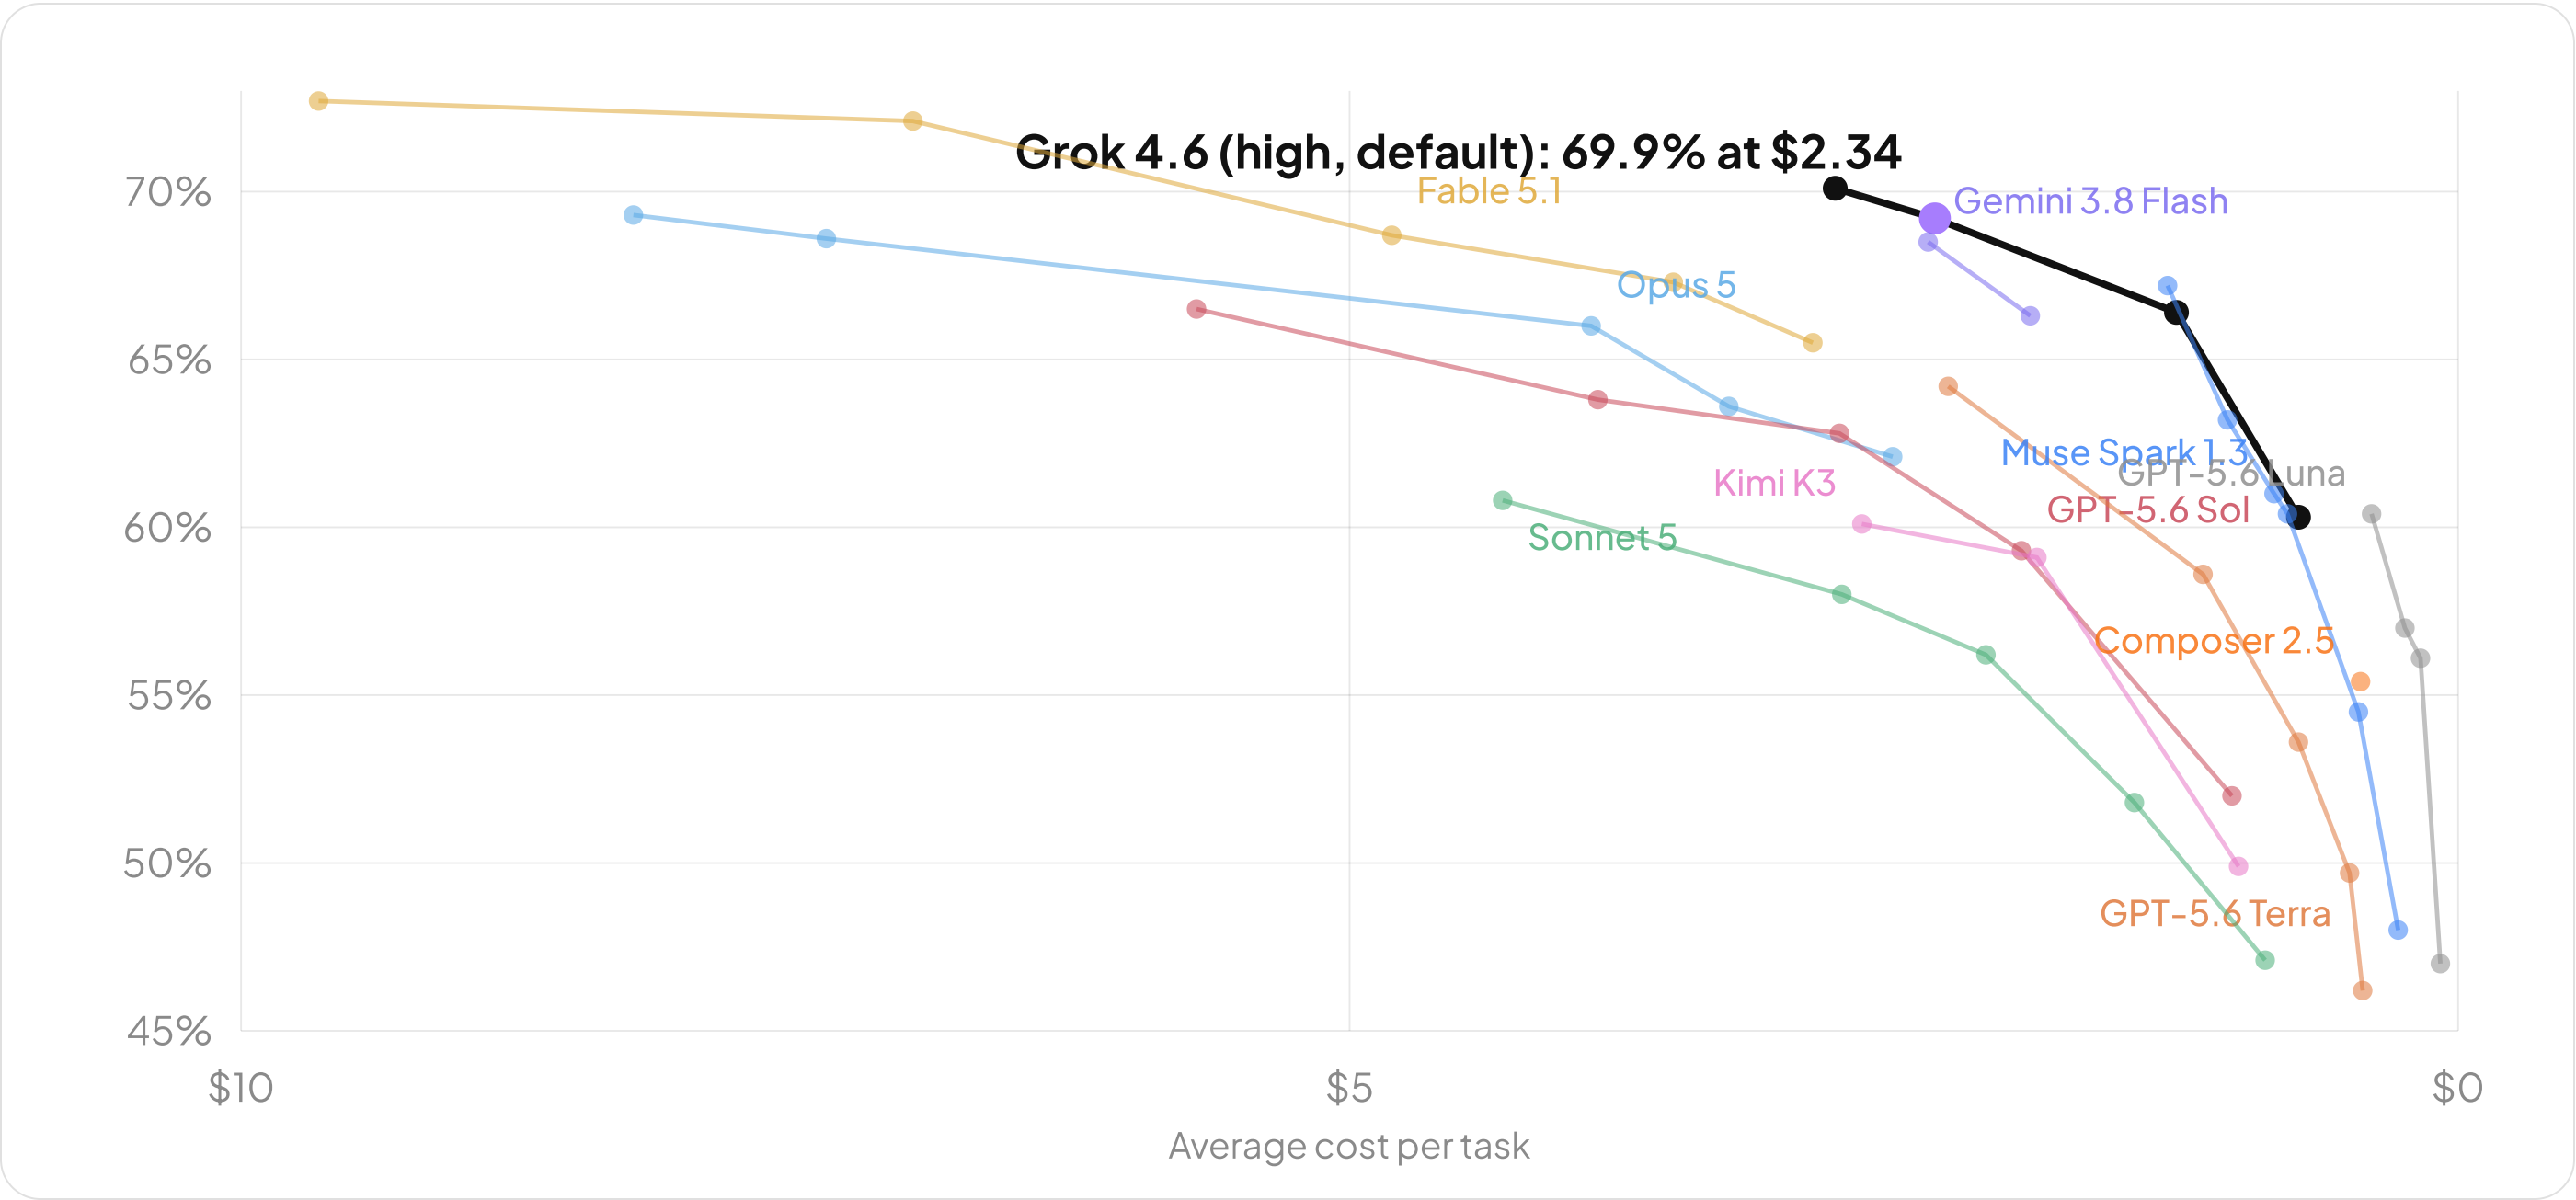

● High value / leverage ● Rote, repetitive work

Grok 4.6: frontier accuracy, a fraction of the cost.

The model inside Grok Bot. **69.9% accuracy at \$2.34 a task** (Grok 4.6 high, the default): a point above Fable 5.1 at under half its cost, and clear of everything else at its price. Accuracy against average cost per task, frontier models, September 2026.

NOW, THE CLUB

Build the *future of AI* at Yale.

We're a club with **real outputs**, not just a mailing list. Here is what this year looks like.

THE BOARD

Seven people *who build*.

Aryan Agarwal
Co-President
COGSCI · 2027

Addison Shea
Co-President
PHYSICS + ENERGY · 2029

Hanson Qin
Treasurer
MATH + CS · 2028

Filippo Fonseca
Head of Development
MECHE + EECS · 2028

Hari Viswanathan
Head of Events
2028

Henry Ng
Head of Sponsorships
2029

David Antwi
Projects Director
EECS · 2028

You
Project lead, fellow, builder
APPLY TONIGHT

We're the home for people who build with AI at Yale. **All builders and people interested in AI are invited. All years.** Will you join us?

WHAT WE ARE DOING THIS YEAR

Real outputs, *not a mailing list.*

OPENS TONIGHT

The Yale AI *Fellowship*

A structured program with an application and a curriculum, run by the board. Finish it and it goes on your LinkedIn for a reason.

FALL

Project *teams*

Three teams to apply to tonight, each paired with a professor or grad student. Poster-session demo day in the fall; the ambitious ones go further.

EVERY OTHER WEEK

Workshops

Coding agents, AI-native workflows, mini hackathons. Build an agent that manages your classes. Hands on, every time.

NOVEMBER 10

Fireside *chat*

With a climate-AI founder, alongside SciCity at Tsai CITY. We lead the conversation, you bring the questions.

FALL

Research *showcase*

Ten labs, grad students presenting, a hundred people in the room. Built for first-years who cannot take the advanced AI courses yet.

SPRING

Trips

NYC in April. SpaceX New York and Cursor are on the shortlist. All paid for.

MAY

Yale AI *Symposium*

The year's project teams get their own presentation slot. The capstone.

ALWAYS

The *community*

Slack channels per project team, a weekly email, and connections to the frontier labs: SpaceXAI, Cursor, OpenAI, MIT-IBM Watson AI Lab.

TRIPS AND CONNECTIONS

We get you in the rooms that matter. *All paid for.*

Last spring: the MIT-IBM Watson AI Lab. This spring: New York in April, with SpaceX New York and Cursor on the shortlist. Plus fireside chats with founders on campus, and the people behind Cursor, Grok Bot, and OpenAI in our corner.

GET INVOLVED TONIGHT

Concrete options, *not vague promises.*

01

Apply to the *fellowship*

Application opens tonight. Link and QR to come from the board.

02

Apply to a *project team*

Three teams. Tell us what you want to build on the interest form and we cluster from there.

03

Join the *list*

Scan the QR at the end, follow us on Instagram and LinkedIn, and watch for the X account.

kickoff challenge

club trips

portfolio projects

connections to frontier AI companies

fellowship

research showcase

Grok Bot

Get **Cursor Pro**. On SpaceXAI.

- 1 Scan the code** on the right.
It opens Cursor's redeem page for this room.
- 2 Sign in to Cursor**, or create an account.
Any email works. Your Yale one is easiest.
- 3 Claim the credit:** \$22 in Cursor credits.
Pro is \$20 a month, so that is a month of Cursor Pro. The credit is just how it is handed out. Pro is what unlocks Grok Bot.
- 4 Open Cursor, open Grok Bot**, and start building.
Then keep going: the build challenge is next.

Courtesy of **SpaceXAI**

One per person

Expires when the room's **200** are gone

SPACEX

● Tonight only room code · 200 redemptions

SCAN TO REDEEM

cursor.com/redeem/event/yale-ai-association-fall-kickoff

You have a month. Use all of it.

Cursor is the editor. Grok 4.6 is the model. **Grok Bot is the teammate.**

The whole SpaceXAI suite, unlocked tonight. Pick one real thing you are already doing this week and hand it over.

CURSOR

Write your psets, your side project, your club's website **in Cursor**. Tab, agent mode, the works. Pro is the full experience.

GROK 4.6

Set it as your model in Cursor. **Frontier accuracy**, cheap enough to leave running on the long tasks.

GROK BOT

Give a bot a job: inbox triage, meeting notes, a research digest, your recruiting tracker. **It has its own computer**. Let it work.

Who's ready to earn perks from SpaceXAI and build something cool?

A competition. Three winners, three months of perks. Starts now.

THE COMPETITION

Rapid-fire Cursor.

How quickly can you build an app for Yale students?

Start here, in the room, on the Pro you just redeemed. Finish tonight or tomorrow.

Useful beats **flashy**. Three winners get **three months of Cursor**.

● **Competition** starts now · ends tomorrow at midnight

THE BRIEF

A **useful app** for Yale students, built in Cursor. Classes, clubs, dining, schedules, recruiting, research, anything you actually wish existed.

PROOF

A **screenshot of you building it in Cursor** in the project **README**. Solo or a team of up to three.

SUBMIT

The **GitHub link** at **yale-ai.org/win** by **Thursday, September 10, 11:59 PM**. Set the repo to **public**. Everything on this slide lives at **yale-ai.org/competition**.

PRIZES

Three winners, each with **three months of Cursor** from SpaceXAI. Judged on usefulness, craft, and speed. **Winners get an email** within a few days.

Three winners. Three months of Cursor each.

We asked SpaceXAI for more for the winners. This is how long it took. That is what backing the Yale builder community looks like.

...something to tell the people who submit a project. (edited)

FW

Fiona Whittington 10:42 PM

Yes, more credits is great. I would recommend giving them three months of cursor credits, in my opinion, it's better than one month of ultra

1

I can bless them afterwards just send me their emails

1

Fiona Whittington, community at SpaceXAI, on Slack the night before the kickoff.

Deadline Thursday, September 10 · 11:59 PM

Submit at yale-ai.org/win

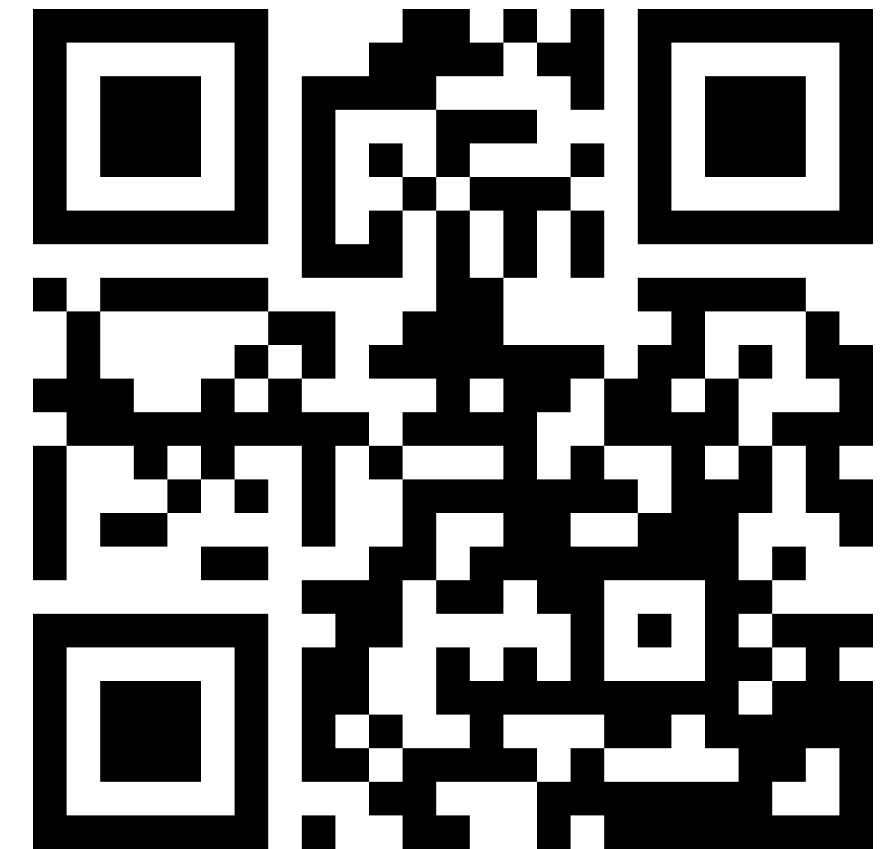

One form: your name, the  **GitHub link** (repo set to **public**), one sentence on what it does. The **README** needs a screenshot of you building it in Cursor.

Winners hear from us by email within a few days. Start now, ship by tomorrow night.

Solo or teams of **3**

Judged on **usefulness**, craft, speed

Three winners · **three months** of Cursor each

SCAN TO SUBMIT

yale-ai.org/win

Tonight was the *start*.

TONIGHT

A month of *Cursor Pro*

Redeemed in this room, on SpaceXAI. Grok Bot unlocked.

THIS WEEK

Ship the *app*

Submit by Thursday at midnight. Three winners get three months of Cursor from SpaceXAI.

THIS YEAR

More *credits* for builders

Keep building with Yale AI (fellowship, project teams, workshops) and SpaceXAI keeps backing you.

Now go *build*.

Join the **Yale AI Slack** to stay up to date with trips, workshops, speaker events, industry panels, and more.
